

SUPPLY CHAIN MANAGEMENT

Militaries around the world are now implementing cost-effective logistics management programs as a vital component to maximizing their operations. Our experience has led us to develop strategies for spares and rotables support that can counteract the negative effects of aircraft aging.

WHAT MAKES OUR STRATEGIES OPTIMAL ?

- ✓ Product knowledge gained from more than 50 years of logistical experience.
- ✓ Inventory of more than 325,000 parts, which enables us to provide exchanges or loans while repairs are taking place, minimizing downtime.
- ✓ Formalized working relationships with OEMs, repair facilities and customers in 16 countries around the world – if we don't have a part, we know where to find it.
- ✓ Forecasting via our Quantum ERP software allows us forward planning and analysis to manage and monitor trends, and know when to stock spares.
